Demo video is also available in GitHub.

This website is designed to be a task management system that is specifically designed to help users with planning and organization of tasks in strategy games. In its final state, the system will provide the user with recommendations for some selected games (namely, the *Civilization* and *Football Manager* game series).

In order to run the system, a user will need an internet browser and a local web server solution like WAMP or XAMPP. MySQL would be helpful as well.

Users will be able to create an account and sign in, and upon signing in, their boards, cards, and lists will be retrieved from the database. This is still a work in progress, so users are not yet able to log out or edit any boards, cards, or lists. Additionally, the system does not yet have support for the recommendations system.
